

# MATERIAL HANDLING

## Why Do Some Plants Go Forklift-Free?

There's a lot of buzz about going "forklift-free." While forklifts will always have a place, it's figuring out where smaller, safer, more ergonomic and agile equipment can fit - that's where Amigo Mobility can help.

The two main benefits Amigo has identified are:

- **Safety** - Every year in the U.S., nearly 100 workers are killed & tens of thousands are seriously injured in forklift-related incidents.
- **Reduced Costs** - Smaller equipment reduces forklift lease & maintenance costs and scales down the extra space needed for forklift replenishment lanes.

If you're working towards reducing your fleet size, towing carts like Dex Pro+ work best for intra-facility material transport. Motorized towing and tugger carts provide safer alternatives for workstation areas. They're smaller and can pass through traffic and aisles with better control than forklifts. Containing forklifts when possible and using carts to deliver materials increases warehouse efficiency and promotes safety.
