

# TAKE A LOAD OFF

with the unparalleled strength of  
Tarrison's wire shelving.

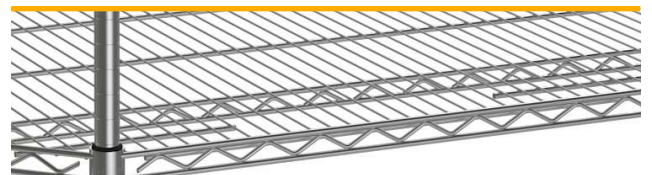

## 01

Unlike some manufacturers, Tarrison makes the connection. Tarrison's trusses are always connected to the perimeter truss, which significantly reduces deflection and bowing in all standard shelf configurations.

## 02

Tarrison provides more top mat wires than most competitors in the industry, resulting in a shelf with superior strength!

## 03

Support rods are foundational to the strength of any shelf, which is why Tarrison only manufactures support rods that are thick, strong, and secure.
